Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring hands-on experience designing and operating Azure infrastructure, building infrastructure as code with Terraform, and automating application delivery. The opportunity to help shape a cloud platform for Corvale's next generation of trains particularly appeals to me because the role brings infrastructure design, secure networking and production operations together.

In my current Cloud Engineer contract, I build and operate Azure infrastructure, Terraform modules, Azure DevOps pipelines and AKS environments. I developed a hub-and-spoke network across three subscriptions, including Azure Firewall, private DNS zones, private endpoints and VNet peering. I also added Terratest module checks and nightly infrastructure drift detection. For 15 internal applications, I replaced manual deployments with YAML pipelines for build, test and deployment to App Service or AKS, helping increase deployment frequency from roughly monthly to several times a week for most applications.

Earlier, as a Systems Administrator, I administered approximately 250 Windows and Linux servers and led the migration of 60 VMware servers to Azure IaaS. We completed the cut-over over six weekends without unplanned downtime. This work, together with my experience using Azure networking, site-to-site VPN and PowerShell, has given me a practical foundation in infrastructure reliability, security and system operations. I also hold Azure Administrator Associate and Terraform Associate certifications.

I would welcome the opportunity to discuss how my cloud infrastructure and automation experience could contribute to Corvale's fleet connectivity platform and its work taking systems from design into production. Thank you for your consideration.

Kind regards,
Samuel Achterberg-Osei
