Dear Corvale Mobility Hiring Team,

I am writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I design, build and operate Azure infrastructure, with hands-on experience in Terraform, cloud networking, platform operations and deployment automation. Corvale's focus on shaping connected transport systems and taking engineering work through to production is a strong match for the work I do.

In my current contract at Havenstad Logistics, I build and maintain Azure landing-zone infrastructure, Terraform modules, Azure DevOps pipelines and AKS environments. I designed a hub-and-spoke network across three subscriptions, including Azure Firewall, private DNS zones, private endpoints and VNet peering. I also added Terratest module tests and nightly infrastructure drift detection. For 15 internal applications, I replaced manual releases with build, test and deployment pipelines, increasing deployment frequency from roughly monthly to several times per week for most applications.

Earlier, as a systems administrator for municipal IT services, I planned and led the migration of 60 VMware servers to Azure IaaS. We completed the cutover over six weekends with no unplanned downtime. That work, alongside my experience with Windows and Linux servers, site-to-site VPNs and PowerShell automation, has given me a practical foundation in infrastructure reliability, networking and security. I am also a Microsoft Certified Azure Administrator Associate and Terraform Associate.

I would welcome the opportunity to bring this experience to Corvale's fleet-connectivity platform and contribute to its architecture, infrastructure and operational reliability. Thank you for considering my application. I look forward to discussing how my background could support the team.

Kind regards,
Samuel Achterberg-Osei
