Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring hands-on experience designing and operating Azure infrastructure, building Terraform modules, and automating application releases. Corvale's work to connect a new train fleet with cloud services particularly interests me because it calls for dependable infrastructure, systems design, thoughtful network design, and effective collaboration with backend teams.

In my current contract at Havenstad Logistics, I built a Terraform-based hub-and-spoke network across three Azure subscriptions, including Azure Firewall, private DNS zones, private endpoints, and VNet peering. I added Terratest module tests to the pipeline and a nightly drift-detection job. I also replaced manual deployments for 15 internal applications with Azure DevOps YAML pipelines, increasing deployment frequency from roughly monthly to several times per week for most applications. I operate AKS, including upgrades, node pools, and ingress, while application manifests remain developer-owned.

Earlier, as a systems administrator for a municipal IT department, I administered around 250 Windows and Linux servers and led the planning and execution of a migration of 60 servers from VMware to Azure IaaS. The cut-over was completed over six weekends without unplanned downtime. My networking and security experience also includes Azure VNets and site-to-site VPN, as well as a repeatable PowerShell and checklist-based Microsoft 365 security baseline covering MFA, Conditional Access, mailbox auditing, and backups. These experiences have given me a practical foundation for building infrastructure that is secure, reliable, and operable.

I would welcome the opportunity to discuss how my Azure infrastructure design and operation, Terraform, networking, security, and platform delivery experience could contribute to Corvale's fleet connectivity work. Thank you for your consideration.

Kind regards,
Samuel Achterberg-Osei
