Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity engagement. My experience designing Azure infrastructure, building Terraform-based networking, and delivering deployment pipelines is relevant to the work of taking the infrastructure behind Corvale's new train fleet from design towards production.

At Havenstad Logistics, I designed and built a Terraform hub-spoke network across three subscriptions, with Azure Firewall, private DNS zones, private endpoints for storage and SQL, and VNet peering. I added Terratest module tests and nightly drift detection. I also replaced manual deployments for 15 internal .NET and Node apps with Azure DevOps YAML pipelines targeting App Service or AKS, increasing deployment frequency from roughly monthly to several times per week for most apps. I operate AKS, including upgrades, node pools, and ingress, while application manifests remain developer-owned.

Earlier, at Maasbrug Gemeente IT Services, I led the migration of 60 servers from VMware to Azure IaaS. We completed the cutover over six weekends with no unplanned downtime. My experience also includes PowerShell automation and repeatable Microsoft 365 security baselines. My cloud experience is Azure-focused, and I hold the Azure Administrator Associate and Terraform Associate certifications.

Corvale's work connecting onboard train systems to cloud services is a compelling application of cloud infrastructure and networking. I would welcome the opportunity to discuss how my Azure, Terraform, and platform operations experience could contribute to the engagement.

Kind regards,

Samuel Achterberg-Osei
