Samuel Achterberg-Osei

Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity engagement. I bring hands-on Azure infrastructure and operations experience, with a strong match to the role's infrastructure-as-code, networking, and platform-delivery work.

At Havenstad Logistics, I designed Azure hub-spoke landing-zone networking with Terraform, including Azure Firewall, private DNS zones, private endpoints, and VNet peering across three subscriptions. I also added module tests and nightly drift detection, and replaced manual deployments of 15 internal .NET and Node applications with Azure DevOps pipelines. For most applications, deployment frequency increased from roughly monthly to several times per week.

Earlier, I planned and executed a 60-server VMware-to-Azure migration, completed over six weekends without unplanned downtime. In my current role I operate AKS, including upgrades, node pools, and ingress, while developers own the application manifests. My cloud delivery experience is Azure-focused, and I would bring this infrastructure, networking, and operational foundation to Corvale's work connecting a new train fleet to cloud services.

I would welcome the opportunity to discuss how my experience with Azure, Terraform, networking, and deployment automation could contribute to Corvale's fleet connectivity platform.

Kind regards,
Samuel Achterberg-Osei
