Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting Corvale Mobility's fleet connectivity platform. My recent work combines Azure infrastructure design, Terraform, networking, and production deployment automation—experience I can bring to the challenge of building and operating the cloud platform for Corvale's new generation of trains.

At Havenstad Logistics, I built Terraform-based Azure landing-zone networking across three subscriptions, using Azure Firewall, private DNS zones, private endpoints, and VNet peering. I added Terratest module tests and nightly drift detection. I also replaced manual deployments for 15 internal .NET and Node applications with Azure DevOps YAML pipelines for App Service and AKS, increasing deployment frequency for most applications from roughly monthly to several times per week. I operate AKS, including upgrades, node pools, and ingress.

Earlier, I planned and executed a VMware-to-Azure migration of 60 servers, completing cutover over six weekends without unplanned downtime. My cloud infrastructure experience is Azure-based, and my background also includes Windows and Linux systems administration and practical Microsoft 365 security work. I would bring this infrastructure and delivery experience to Corvale's work on reliable, secure train-to-cloud services.

I would welcome the opportunity to discuss how my experience in Azure infrastructure, Terraform, networking, and deployment automation could contribute to the fleet connectivity team.

Kind regards,
Samuel Achterberg-Osei
