Dear Corvale Mobility hiring team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. In my current role at Odrava Health Software, I have focused on building and improving CI/CD pipelines and test infrastructure, with the last two years particularly focused on this work, and I'm now seeking to apply my CI/CD and test-infrastructure experience in a DevOps or platform-engineering role. Corvale's work to connect a new train fleet with its cloud platform particularly interests me because it combines infrastructure, reliable services and a real-world transport system.

In my current role, I own CI/CD infrastructure and repeatable test-environment workflows for three product teams and approximately 25 developers, working with Helm deployments to a shared Kubernetes cluster. I profiled the pipelines for three teams, then parallelised test jobs, added dependency caching, and separated end-to-end testing into a dedicated stage. This reduced average runtime from 38 to 14 minutes and lowered monthly CI runner costs by approximately 30%. I also built short-lived merge-request environments, deploying the application and PostgreSQL with Helm to a shared Kubernetes cluster. These environments gave QA and product stakeholders a repeatable way to review features and run end-to-end tests before merge. I've documented how our CI system works for team onboarding and mentored two QA interns, experience that has taught me to make technical systems understandable and useful to the people who depend on them.

Alongside my work experience, I built a three-node k3s homelab with GitOps deployments, Prometheus, Grafana and Loki monitoring, Traefik ingress, and cert-manager for TLS certificate management, and used Terraform to provision infrastructure for a personal Hetzner VPS. My cloud exposure includes AWS EC2 and S3 learning projects, while my hands-on Terraform work has been in a personal Hetzner project. Professionally, my strongest experience is in CI/CD, Kubernetes-based test environments, Linux tooling, and observability. I am also studying for the Certified Kubernetes Administrator (CKA) exam, which is booked for January 2027. I also documented the CI system for onboarding and mentored two QA interns, helping different stakeholders understand and use the technical workflows I owned. I would welcome the opportunity to discuss how my experience making CI/CD and test environments repeatable, observable and usable for engineering teams could support Corvale's fleet-connectivity platform.

Thank you for your time. I hope to hear from you.
