Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My background is in QA automation and test infrastructure, with recent work focused on CI/CD pipelines and ephemeral Kubernetes environments. I have built tools and environments that help product teams test, review and ship changes more effectively.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed via Helm to a shared Kubernetes cluster. Each environment includes the application, PostgreSQL and seeded data, and is removed automatically after merge or 48 hours of inactivity. I also improved pipeline execution from 38 to 14 minutes and reduced monthly CI runner costs by about 30%. These projects have given me hands-on experience with automation, repeatable deployments and improving the day-to-day usability of infrastructure for developers.

Alongside my professional work, I run a personal three-node k3s cluster with Argo CD, Prometheus, Grafana and Loki, and have provisioned a small Hetzner VPS with Terraform. I am also learning AWS through free-tier EC2 and S3 basics; my professional infrastructure work has not been on AWS. At Odrava, I have namespace-level access to the shared Kubernetes cluster and build Helm charts for test environments. I have documented how our CI works for onboarding and mentored two QA interns, experiences that have strengthened my technical communication.

The opportunity to help build infrastructure for Corvale's new train fleet particularly interests me: it brings together reliable systems, developer-facing infrastructure and a real-world connectivity challenge. I would welcome the opportunity to discuss how my CI/CD and platform-focused experience could contribute to the Fleet Connectivity team.

Kind regards, Marta Kowal-Brandt
