Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring hands-on experience building CI/CD and test infrastructure, including short-lived environments deployed through GitLab CI and Helm to a shared Kubernetes cluster. I am interested in applying that experience to the infrastructure behind Corvale's new train fleet and its connection to backend services.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge request environments containing an application, PostgreSQL and seeded data. These environments support feature review and end-to-end testing, and are automatically removed after merge or 48 hours of inactivity. I also reduced average pipeline time from 38 to 14 minutes and helped teams reduce the flaky test rate from 7% to below 2% using test-result collection and Grafana dashboards. This work has involved making delivery workflows more repeatable and making test systems easier for teams to use and understand.

Alongside my professional work, I run a three-node k3s homelab managed with Argo CD, with Prometheus, Grafana and Loki for monitoring. I have also provisioned infrastructure for a small Hetzner VPS with Terraform. My Kubernetes work at Odrava is at namespace level, with the platform team operating the shared cluster; my infrastructure-as-code and cloud experience is developing through personal projects and study. I am currently studying for the CKA, with the exam booked for January 2027.

Corvale's project to connect a new generation of trains with cloud services is a compelling setting in which to contribute my automation, deployment and observability experience while growing further as an infrastructure engineer. I would welcome the opportunity to discuss how my experience could support the Fleet Connectivity team.

Kind regards,
Marta Kowal-Brandt
