NADIA BRENNAN-AZIZ

Senior Platform / Cloud Infrastructure Engineer

Manchester, UK | nadia.brennanaziz@example.com | +44 7700 900909
github.com/nba-sre-example

PROFESSIONAL SUMMARY

Senior platform and site reliability engineer with 10 years of infrastructure experience, including the last 6 years running Kubernetes platforms on AWS. Experienced in designing, building and operating cloud infrastructure, maintaining Terraform-based environments, and supporting product teams with reliable, observable platforms. Tech lead for a five-person platform team, with a track record of leading technical work across teams and delivering measurable improvements in deployment speed, reliability and cloud cost.

CORE SKILLS

Cloud infrastructure: AWS (EKS, EC2, VPC, IAM, RDS, S3, SQS, Route 53, CloudFront), Linux
Infrastructure as code: Terraform, Atlantis, Crossplane, Puppet
Platform engineering: Kubernetes, Helm, Kustomize, Argo CD, Karpenter, GitHub Actions
Reliability and observability: Prometheus, Grafana, Loki, Alertmanager, OpenTelemetry, SLOs and error budgets, incident management
Automation and testing: Go, Python, Bash, k6

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd (B2B accounting SaaS)
Manchester / remote | Apr 2022 – Present

- Tech lead for a five-person platform team operating an AWS EKS platform across 8 clusters and 3 regions, supporting approximately 350 services.
- Built an internal developer platform with golden-path service templates, Argo CD GitOps and Crossplane self-service for RDS, SQS and S3. Adopted by all 14 product teams, it reduced the time from new service to production from around two weeks to under one day.
- Led Terraform-based provisioning of platform capabilities and supported teams in deploying services that are easier to operate.
- Introduced SLOs and burn-rate alerts for the 20 most critical services, with an error-budget policy agreed with product leadership; on-call pages per week fell by approximately 60%.
- Replaced cluster-autoscaler managed node groups with Karpenter and introduced spot instances for stateless workloads, reducing EC2 spend by 38% (approximately GBP 410,000 per year).
- Serve in the incident commander rotation and established the incident and post-mortem process.

Site Reliability Engineer | Brightwater Games
Leeds | Jan 2019 – Mar 2022

- Operated AWS game-backend infrastructure (EC2, ECS and later EKS) for titles with up to 1.2 million daily active players.
- Managed AWS infrastructure with Terraform across approximately 40 modules, using Atlantis for plan and apply workflows on pull requests.
- Replaced a noisy Nagios setup with a Prometheus, Grafana, Alertmanager and Loki observability stack.
- Planned capacity and ran k6 load tests ahead of launches. A 2020 test simulating 300,000 concurrent players identified a connection-pool limit that was fixed before launch.

SELECTED PROJECT

Kubernetes cleanup controller | Open source side project | 2024
|

- Built a small Go controller using controller-runtime to delete expired preview namespaces; the project has approximately 120 GitHub stars.

LEADERSHIP & COMMUNITY

- Mentored three engineers moving from backend engineering into SRE.
- Speaker at a UK DevOps meetup in 2024: “SLOs that product managers care about”.

EDUCATION

BSc Computer Science | University of the North Moors | 2016

CERTIFICATIONS

AWS Certified Solutions Architect – Professional | 2023
Certified Kubernetes Administrator (CKA) | 2021; renewed 2024

LANGUAGES

English (native) | Urdu (conversational)
