Dear Tessel Cargo Software Hiring Team,

I'm applying for the Backend Engineer role on the Routing & Tracking team. I bring seven years of backend engineering experience, primarily building and operating Java and Spring services, with hands-on work across REST APIs, relational databases, Kafka, automated testing, and cloud deployment. Tessel's focus on dependable shipment information and on engineers taking ownership of the services they run strongly aligns with the work I've done in production environments.

At Tejo Insurance Tech, I develop and maintain seven Java/Spring Boot microservices for policy quoting and claims intake. I designed and versioned an OpenAPI REST integration used by 12 broker partners, and improved the quote endpoint's p99 latency from 1.8 seconds to 450 ms by adding Redis caching and resolving JPA N+1 queries. I also introduced idempotent Kafka consumers and an outbox table for claims workflows, eliminating duplicate claim records. These experiences are relevant to improving the performance and reliability of Tessel's tracking API and handling event-driven workflows.

My background also includes working with relational databases including PostgreSQL and Oracle, tuning JPA queries to remove N+1 performance issues, building booking and payment features, writing Testcontainers integration tests that increased payments-module coverage from 35% to 70%, and deploying services through Jenkins pipelines to AWS EKS using Docker, Kubernetes, and Helm. I participate in an on-call rotation and am accustomed to supporting production services. While my professional backend experience is primarily in Java rather than Python, the role's acceptance of comparable-language experience makes my production backend experience directly relevant.

I'm drawn to Tessel's pragmatic engineering culture and values of "Be dependable. Say what you see. Leave it better." I would welcome the opportunity to discuss how my experience building reliable APIs and event-driven services could contribute to the Routing & Tracking platform.

Kind regards,
Daniel Okafor-Reyes
