Hello Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer looking to move into platform engineering full time, and the opportunity to help build observable, reliable infrastructure for train-to-cloud connectivity is a compelling next step.

At Odrava Health Software, I own GitLab CI pipelines for three product teams. By profiling pipelines, parallelising tests and caching dependencies, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by approximately 30%. I also built merge-request environments deployed through Helm to a shared Kubernetes cluster, giving QA and product teams a way to review features before merge. I write the Helm charts with namespace-level access; the platform team operates the cluster.

Outside work, I built a three-node k3s homelab with Argo CD, Prometheus, Grafana and Loki, and provisioned a personal Hetzner VPS with Terraform. I have also used Traefik and cert-manager for ingress and TLS, and explored AWS EC2 and S3 at a basic level. At Odrava, I documented how our CI works for onboarding and built Grafana dashboards that helped teams identify flaky tests.

I would welcome the chance to discuss how my experience with infrastructure automation, observability and supporting product teams could contribute to Corvale's fleet connectivity work. Thank you for your consideration.

Marta Kowal-Brandt
