Dear Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. I'm a QA Automation Engineer with seven years of experience, including hands-on ownership of CI/CD pipelines and test infrastructure for three product teams. I'm now looking to move into DevOps and platform engineering full time, and Corvale's work shaping the infrastructure that connects a new train fleet to cloud services is a compelling opportunity to apply my experience in CI/CD, ephemeral environments, observability, and infrastructure automation to a broader platform challenge.

At Odrava Health Software, I own GitLab CI pipelines for around 25 developers. By parallelising jobs, caching dependencies and separating end-to-end testing into its own stage, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I also reduced the flaky-test rate in the approximately 900-test pytest and Playwright suite from 7% to below 1%. I also built short-lived merge-request environments with Docker Compose and Helm on a shared Kubernetes cluster, so teams can review changes and run tests against seeded data. This enabled QA and product teams to review changes before merge and run end-to-end tests in consistent environments. This work has given me practical experience building reliable, repeatable infrastructure that supports developers and makes systems easier to validate.

Alongside my work experience, I built a three-node k3s homelab with applications deployed through Argo CD, and configured monitoring with Prometheus, Grafana and Loki, as well as Traefik ingress and cert-manager for TLS. I have also used Terraform to provision a small Hetzner VPS and am studying for the CKA exam. I also have basic personal-learning experience with AWS EC2 and S3, alongside Linux experience in my infrastructure projects. My Kubernetes work at Odrava is scoped to namespace-level access and Helm-based test environments; my Terraform experience is from a personal project. I would bring this hands-on foundation, a strong analytical approach and clear communication—including writing the CI guide used in team onboarding—to Corvale's collaborative, engineering-led team.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience in test infrastructure and my hands-on foundation in CI/CD, Kubernetes-based test environments, monitoring, and infrastructure automation could contribute to Corvale's fleet connectivity work.

Marta Kowal-Brandt
