Dear Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I'm a QA automation engineer looking to move into infrastructure engineering full time, and the opportunity to help build an observable, reliable platform for a new train fleet is a compelling next step.

At Odrava Health Software, I own GitLab CI pipelines for three product teams. I reduced average pipeline time from 38 to 14 minutes through parallel jobs, caching and changes to end-to-end testing, while cutting monthly runner costs by approximately 30%. I also built short-lived merge-request environments using Helm on a shared Kubernetes cluster. The platform team operates the cluster; I write the charts and work with namespace-level access. These environments give QA and product teams a way to review features before merge and run end-to-end tests against them.

I've also built Grafana dashboards that helped teams identify and fix flaky tests, and wrote CI documentation used in onboarding. Outside work, I built a three-node k3s homelab with Argo CD, Prometheus, Grafana and Loki, and used Terraform to provision a personal Hetzner VPS. This work has given me practical experience with deployment, monitoring and infrastructure as code that I would bring to Corvale's engineering-led team.

I would welcome the chance to discuss how my CI/CD and test infrastructure experience could contribute to your fleet connectivity platform. Thank you for your consideration.

Marta Kowal-Brandt
