Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current work as a QA Automation Engineer at Odrava Health Software, I own GitLab CI pipelines and automate Kubernetes-based test environments used by three teams. I'm looking to build further on this infrastructure experience, and the opportunity to help shape the platform connecting a new train fleet with cloud services is particularly compelling.

At Odrava, I built merge-request environments with an application, PostgreSQL, and seeded data, deployed through Helm to a shared Kubernetes cluster. I automated their cleanup and enabled QA and product teams to review features before merge, with end-to-end tests running against the environments. I also profiled CI pipelines across three teams, reducing average run time from 38 to 14 minutes and monthly runner costs by about 30%. To make test quality more visible, I built a Python and PostgreSQL process and Grafana dashboards that helped teams reduce the flaky-test rate from 7% to below 1%.

My infrastructure experience includes namespace-level work on a Kubernetes cluster operated by a platform team, TLS certificate management with cert-manager in a personal k3s and GitOps project, and provisioning a small Hetzner VPS with Terraform. I have also built familiarity with AWS EC2 and S3 fundamentals through learning. I document technical processes for others—in my current role, I wrote the CI guide used for onboarding—and have mentored two QA interns. These experiences have strengthened my ability to make infrastructure easier to use, review and operate collaboratively.

I would welcome the opportunity to discuss how my experience in CI/CD, Kubernetes test infrastructure, automation and observability could contribute to Corvale's fleet connectivity work. Thank you for your time and consideration.

Marta Kowal-Brandt
