Dear Verdane Care team,

I am applying for the Full-Stack Engineer (TypeScript / React) – Patient Experience role. I am a Computing graduate with First Class Honours and hands-on experience building React and TypeScript applications, including Node.js/Express APIs and PostgreSQL-backed features. I am drawn to Verdane Care's focus on making care simpler through practical, accessible technology.

In my final-year project, Tidewatch, I built the React and TypeScript frontend for an accessible app presenting tide and weather information, alongside a Node.js/Express API and PostgreSQL features for user favourites. I tested the app with NVDA and VoiceOver and achieved a Lighthouse accessibility score of 100. During my internship at Harbourline Media, I also fixed accessibility issues across more than 20 components and built a reusable image gallery with Jest and React Testing Library tests.

I would bring a strong focus on accessible, user-focused experiences, supported by project work including a wellness booking site and Tidewatch, an accessible tide and weather application for sea swimmers. I have also built a Next.js booking site for a local yoga studio and supported around 30 students as a first-year web development lab teaching assistant. My Study Buddy group project also included building React login screens with Firebase Authentication. Verdane Care's principles of "Patients first," "Privacy by default," and "Simple beats clever" particularly appeal to me, especially the emphasis on making software useful and easy to use for the people it serves. I would bring project experience with Jest and React Testing Library unit tests, Storybook documentation, and Git/GitHub.

Thank you for considering my application. As a native English speaker, I can contribute clearly in English when working with engineers, designers, and product colleagues. I would welcome the opportunity to discuss how my experience could contribute to Verdane Care's Patient Experience team.

Yours sincerely,

Aiyana Brooks-Tan
