Dear Verdane Care hiring team,

I am writing to apply for the Full-Stack Engineer – Patient Experience role. Verdane's focus on accessible, easy-to-use patient software appeals to me: I first became interested in accessibility when a friend who uses a screen reader showed me how difficult many websites were for her to use.

During my software development internship at Harbourline Media, I built React components and implemented accessibility fixes. I developed a keyboard- and screen-reader-friendly image gallery, documented it in Storybook and tested it using Jest and React Testing Library.

For my final-year project, Tidewatch, I built a React and TypeScript frontend and a Node.js/Express API that cached data from public weather and tide APIs, with PostgreSQL for user favourites. I tested the app with NVDA and VoiceOver, and it achieved a Lighthouse accessibility score of 100. I have also used Next.js in a freelance project for a yoga studio and supported first-year web development students as a teaching assistant.

I would welcome the opportunity to bring this experience to Verdane's patient-facing products and discuss how I could contribute to the team. Thank you for considering my application.

Yours sincerely,
Aiyana Brooks-Tan
