Dear Tessel Cargo Software hiring team,

I am applying for the Backend Engineer (Python) role on the Routing & Tracking team. My background combines Python backend development with fleet telematics, including GPS data ingestion and route-history software. I am now looking to return to hands-on individual contributor work, primarily in Python.

At Nordfels Telematik, I built backend software for fleet telematics that ingested GPS data from 300,000 vehicles using Python, C++, PostgreSQL/PostGIS as the relational database, and RabbitMQ, and I led development of the route-history product. At Streamhaus, I led technical development of the Python playback API and designed and wrote most of an entitlement service that handled 120,000 requests per second at peak. This experience is directly relevant to Tessel's work on event ingestion and high-volume, reliable customer-facing APIs.

More recently, I led a strangler-fig migration from a Python 2 monolith to approximately 60 Python 3 and Go services deployed on GKE. I helped establish a FastAPI service template with OpenTelemetry tracing, Prometheus metrics, and Terraform modules; playback API availability improved from 99.5% to 99.95% during the migration. My background also includes Kafka, Kubernetes, Terraform, and production observability with Prometheus and OpenTelemetry. My recent hands-on coding has focused on Python internal tooling and cost dashboard scripts. Earlier in my career, I built a Python automated test harness used by QA for eight years and maintained an open-source Python retry library tested with pytest and tox, reinforcing my practical approach to automated testing and reliable services. I also introduced an RFC process and on-call guidelines at Streamhaus; Tessel's emphasis on short design notes, service ownership and a sustainable pace resonates with that experience.

I would welcome the opportunity to discuss how my Python backend, fleet-telematics, GPS/event-ingestion, PostgreSQL, and high-volume API experience could contribute to the Routing & Tracking team. Thank you for your consideration.

With best regards,
Rafael Moretti-Klein
