RAFAEL MORETTI-KLEIN

Backend Engineer | Python, Go & Platform Services

PROFESSIONAL SUMMARY

Backend and platform engineer with production-service experience in Go and Python, including a high-throughput entitlement service, a migration from a Python 2 monolith to approximately 60 Python 3 and Go services, and reliability improvements to a playback API. More recently led a 45-engineer platform organisation and built internal cloud-cost tooling. Now targeting a hands-on individual-contributor backend role.

TECHNICAL SKILLS

Languages: Python, Go; C++ (project use)
Backend and API technologies: FastAPI, gRPC, Python and Go services, playback API
Data stores and analytics: Cassandra, Redis, BigQuery
Cloud and infrastructure: Google Cloud Platform (GKE), Kubernetes, Terraform; AWS EC2 and S3 (limited exposure)
Observability: OpenTelemetry, Prometheus
Testing: pytest, tox
Other: Looker Studio

PROFESSIONAL EXPERIENCE

Streamhaus GmbH

Director of Engineering *2019–Aug 2026*

- Led the platform organisation of 45 engineers.
- Led the technical side of the playback API.
- Contributed to a strangler-fig migration from a Python 2 monolith to approximately 60 Python 3 and Go services on GKE.
- Established a service template using FastAPI or Go, with OpenTelemetry tracing, Prometheus metrics, and Terraform modules.
- Helped improve playback API availability from 99.5% to 99.95% through platform and reliability improvements.
- Built an internal cloud-cost dashboard using BigQuery billing export, Python scripts, and Looker Studio, with service-level ownership visibility.
- Supported rightsizing and committed-use discounts that saved EUR 4.2 million per year (31%).

Principal Engineer *2015–2019*

- Designed and wrote most of the Go entitlement service, determining what a user could play based on subscriptions, regions, and devices.
- Built a production Go backend service using gRPC, Cassandra, and local in-memory caching; handled peak traffic of 120,000 requests per second with p99 latency under 15 ms.
- Served as technical lead for the playback API.

SELECTED PROJECTS

Open-source Python retry library *Maintainer, 2012–2018*

- Maintained a Python retry library that reached approximately 1,500 GitHub stars; handed over maintenance in 2018.
- Used pytest and tox.

Patent: Adaptive GPS sampling in vehicle fleets *Co-inventor, Nordfels, 2013*

- Co-inventor on a granted German patent for adapting GPS sampling to driving context to reduce data volume.
- Project technologies: C++, statistics.
