Dear Hiring Manager,

I am applying for the Machine Learning Engineer – Customer Support AI role at Quillstone Payments. With more than five years of experience in natural language processing, document classification, and taking ML models from research and prototyping into production, I would welcome the opportunity to apply this background to systems that help merchants and support agents.

At Slavonica Document AI, I developed a document classification model that achieved 94% accuracy across 23 classes and fine-tuned BERTić and XLM-R for named entity recognition in Croatian documents. I also introduced MLflow for experiment tracking and model registration, and established production model-quality and data-drift monitoring for our deployed Python-based services. Our models are delivered as FastAPI services in Docker containers on Azure ML and App Service. I use Python to build these services and Git for version control.

My earlier work at Baranjska kreditna banka included classifying topics in customer complaint texts. I also built and annotated a corpus of Croatian legal texts as a research project assistant. Alongside my professional work, I am pursuing doctoral research in named entity recognition and hold a master's degree in computer engineering.

I would welcome the chance to discuss how my experience building, deploying, operating, and monitoring NLP models in production from research through production could contribute to your Customer Operations AI team. Thank you for your consideration.

Sincerely,
Petra Zlatarić-Novosel
