Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. The opportunity to shape and operate infrastructure for a new generation of connected trains particularly interests me, and it matches my experience building Azure infrastructure, improving deployment pipelines and supporting reliable services.

In my current Cloud Engineer contract at Havenstad Logistics, I work in a three-person team operating an Azure estate of around 400 virtual machines and 12 AKS clusters. I have built reusable Terraform modules for hub-and-spoke networking across three subscriptions, including Azure Firewall, private endpoints and private DNS, with module tests and nightly drift detection. I also replaced manual releases for 15 internal applications with Azure DevOps YAML pipelines, helping most teams move from roughly monthly deployments to several times per week. My AKS work includes upgrades, node pools and ingress.

Earlier, as a Systems Administrator for Maasbrug Gemeente IT Services, I led the lift-and-shift migration of 60 servers from VMware to Azure IaaS. The cutover was completed over six weekends without unplanned downtime. I also automated user provisioning and patch reporting with PowerShell and handled second-line network and Active Directory issues. In freelance work, I supported Microsoft 365 and Azure AD for small businesses, including practical security measures such as MFA, conditional access and backups. I hold the Microsoft Certified: Azure Administrator Associate and HashiCorp Certified: Terraform Associate credentials.

Corvale's focus on end-to-end system ownership and collaborative engineering is a strong match for the way I approach infrastructure work: building maintainable foundations, improving how services are deployed and operated, and contributing practical technical solutions. I would welcome the opportunity to discuss how my Azure, Terraform, networking and operations experience could support the Fleet Connectivity team.

Kind regards,
Samuel Achterberg-Osei
