Dear Hiring Manager,

I am writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. The opportunity to help shape and operate the infrastructure connecting trains to cloud services aligns with my experience designing and operating Azure infrastructure, networking and deployment automation.

At Havenstad Logistics, I am part of a three-person team operating an Azure estate of approximately 400 virtual machines and 12 AKS clusters. I built Terraform modules for a repeatable landing-zone design across three Azure subscriptions, including hub-spoke VNets, Azure Firewall, private DNS, private endpoints and VNet peering. This gave me practical experience turning infrastructure design decisions into repeatable, maintainable platform components. I also added module tests and infrastructure drift detection to the pipeline.

I replaced manual deployments for 15 internal applications with Azure DevOps pipelines covering build, test and deployment to App Service or AKS. In earlier freelance work, I also created a repeatable PowerShell security-baseline process covering MFA, conditional access, mailbox auditing and backups. For most applications, deployment frequency increased from roughly monthly to several times per week. My AKS work includes cluster upgrades, node pools and ingress, while developers own the application manifests. Previously, I led the planning and execution of a 60-server VMware-to-Azure IaaS migration, completing six weekend cutovers with no unplanned downtime.

I would welcome the opportunity to contribute my experience in repeatable Azure infrastructure, secure networking, deployment automation and reliable platform operations to Corvale's fleet connectivity team. Thank you for your consideration; I look forward to hearing from you.

Kind regards,
Samuel Achterberg-Osei
