Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. My experience operating Azure infrastructure, building Terraform modules and automating deployments aligns with the opportunity to help shape and run the cloud platform connecting Corvale's trains to backend services. My primary cloud engineering experience is in Azure, including virtual machines, VNets, AKS, Azure Firewall, private endpoints and Azure DevOps.

At Havenstad Logistics, I work in a three-person team operating an Azure estate of approximately 400 VMs and 12 AKS clusters. I developed Terraform modules for landing-zone networking, including hub-spoke VNets, Azure Firewall and private endpoints, and moved release pipelines for 15 internal applications to Azure DevOps YAML pipelines. This work involved hands-on infrastructure engineering, cloud environment design and operation, infrastructure as code, cloud networking, security, and deployment automation.

Earlier, I administered approximately 250 Windows and Linux servers supporting municipal services and led the lift-and-shift migration of 60 servers from VMware to Azure IaaS. Together with my landing-zone work, this migration provided practical experience in system design across cloud networking and virtual-machine environments. I also automated user provisioning and patch reporting with PowerShell and provided second-line support for network and Active Directory issues. My freelance work added experience establishing backups, MFA and conditional access for small businesses.

I hold Microsoft Certified: Azure Administrator Associate (AZ-104) and HashiCorp Certified: Terraform Associate (003) certifications.

Corvale's engineering-led approach and the opportunity to shape the fleet connectivity infrastructure from the start make this a compelling role. I would bring hands-on ownership developed through operating Azure environments, leading an Azure infrastructure migration, and automating delivery processes.

Kind regards,
Samuel Achterberg-Osei
