Dear Verdane Care team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I'm a full-stack developer with professional experience since 2014, strongest in React and TypeScript, and I'm drawn to Verdane Care's focus on making healthcare more human through accessible, straightforward patient experiences.

In my current role at Älvgrind Fintech, I build customer onboarding and identity-verification features using React, TypeScript, Node.js/NestJS and PostgreSQL. I implemented a BankID verification flow that was A/B tested before rollout and increased onboarding conversion from 61% to 74%. I also built a secure document-upload flow with virus scanning, and improved the onboarding experience's mobile performance, reducing Largest Contentful Paint from 4.1 seconds to 1.9 seconds. This work has given me practical experience handling sensitive identity information and building customer-facing flows where reliability and care matter.

I'm also experienced with accessibility improvements, automated testing and production delivery. I contributed WCAG 2.1 AA audit fixes, and regularly work with Jest, Playwright and GitHub Actions. I collaborate with designers in Figma and have helped migrate backend services from Express to NestJS. Earlier, I tech-led and built most of a React Native ferry-ticket app that reached around 50,000 downloads. I've also mentored at a coding bootcamp.

Verdane Care's principles of "Patients first," "Privacy by default" and "Simple beats clever" resonate with the kind of thoughtful, usable software I want to build. I'd welcome the opportunity to bring my experience in accessible, secure customer journeys to your team and contribute to patient-facing features from the interface through to the API and database.

Thank you for considering my application. I'd be glad to discuss how my experience could support the Patient Experience team.

Best regards,

Oskar Haddad-Lindqvist oskar.hl@example.com | +46 70 555 0808
