Dear Hiring Manager,

I am applying for the Full-Stack Engineer – Patient Experience role at Verdane Care. Your focus on accessible, easy-to-use patient software aligns with my experience building customer-facing web applications across React, TypeScript, Node.js and PostgreSQL.

At Älvgrind Fintech, I develop customer-facing onboarding and KYC features in a six-person cross-functional team. I built a BankID verification flow with QR codes, error handling and retries; following an A/B test and rollout, onboarding conversion increased from 61% to 74%. I also built a document upload flow using S3 presigned URLs, ClamAV virus scanning in Lambda, SQS and PostgreSQL. I helped migrate Express services to NestJS. This work has involved identity verification and KYC processes in a fintech environment.

I have addressed WCAG 2.1 AA accessibility audit findings and worked with designers in Figma to improve the onboarding experience. My performance work reduced mobile Largest Contentful Paint from 4.1 to 1.9 seconds. I write unit and end-to-end tests with Jest and Playwright, and use AWS ECS Fargate, Docker and GitHub Actions in Git-based delivery workflows. My broader frontend experience also includes Next.js and Storybook. Earlier, I mentored at a coding bootcamp and served as project tech lead on a React Native ticketing app.

I would welcome the opportunity to bring this combination of customer-facing product development, accessible and performance-focused web experiences, and full-stack TypeScript experience to Verdane Care's Patient Experience squad. Thank you for your consideration; I would be glad to discuss the role and my work with you.

Kind regards,
Oskar Haddad-Lindqvist
