Dear Hiring Manager,

I'm applying for the Machine Learning Engineer – Customer Support AI role at Quillstone Payments. I'm a data scientist with six years of experience in analytics and data science, and I'm looking to move towards machine learning engineering. The opportunity to work with engineers, data scientists and product managers on tools that help merchants and support agents is a compelling next step.

At Thistlebox, I built a weekly demand forecasting model using LightGBM and calendar features. Operations uses it to order ingredients, and it reduced forecast error from 23% to 14%, with an estimated 9% reduction in food waste. I also built an XGBoost churn propensity model used to target retention offers, validating its uplift with a holdout. These projects have given me experience translating business questions into models that teams can use.

Alongside modelling in Python, I write production SQL in BigQuery and maintain dbt models for the analytics layer. I also design and analyse A/B tests for product and growth teams, and present results to leadership. I'd bring this combination of feature engineering, statistical evaluation and communication to Quillstone's work on customer-support AI.

I'd welcome the chance to discuss how my experience could contribute to the team. Thank you for considering my application.

Kind regards,
Tobias Mwangi-Hartley
