Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. The opportunity to help shape and operate the infrastructure connecting a new train fleet with cloud services is a strong match for my Azure infrastructure and automation experience.

As a Cloud Engineer at Havenstad Logistics, I design, build and operate Azure landing-zone infrastructure, Terraform modules (infrastructure as code) and Azure DevOps pipelines. I designed and implemented a hub-spoke network across three subscriptions, including Azure Firewall, private DNS zones, private endpoints and VNet peering. I also added Terratest module checks and nightly drift detection. For 15 internal applications, I replaced manual deployments with pipelines for build, test and deployment, helping increase release frequency from roughly monthly to several times a week for most applications.

Earlier, as a Systems Administrator, I led the migration of 60 servers from VMware to Azure IaaS, planning and executing the cut-over over six weekends with no unplanned downtime. Across these roles, I have worked with Windows and Linux systems, networking, and practical security automation. I also operate AKS upgrades, node pools and ingress, while application manifests remain owned by development teams. My cloud experience is Azure-focused, supported by the Microsoft Azure Administrator Associate and HashiCorp Terraform Associate certifications.

I would welcome the opportunity to apply this experience to Corvale's fleet connectivity work, particularly the design, automation and reliable operation of the cloud infrastructure behind connected services. Thank you for considering my application. I look forward to discussing how my background could contribute to the project.

Kind regards,
Samuel Achterberg-Osei
