Dear Verdane Care Hiring Team,

I'm applying for the Full-Stack Engineer role on the Patient Experience team. I bring more than 10 years of professional web development experience, including building React and TypeScript applications alongside Node.js services and SQL databases. Verdane Care's focus on patient-first, accessible software that makes healthcare interactions simpler is a strong match for the kind of end-to-end product work I do.

At Älvgrind Fintech, I develop onboarding features across React and TypeScript frontends and Node.js services in NestJS and Express, using PostgreSQL and AWS. I built a BankID identity-verification flow with QR-code handling, error states and retries; after testing and rollout, onboarding conversion improved from 61% to 74%. I also developed a document-upload workflow using S3 presigned URLs, malware scanning in Lambda, and SQS and PostgreSQL status tracking. This experience has made me attentive to careful handling of sensitive user information, while my WCAG 2.1 AA audit fixes and mobile performance work have strengthened my focus on accessible, responsive experiences.

I'm comfortable owning work from interface through backend and database, and I use Jest and Playwright as part of automated testing and Git-based delivery. I've collaborated closely with designers in Figma, helped migrate legacy Express services to NestJS, and worked with feature flags and A/B testing. These experiences align well with your squad's work across patient-facing features, APIs, usability and frequent production releases. I would welcome the opportunity to bring this practical, collaborative approach to Verdane Care as you build tools for clinics and their patients.

Thank you for considering my application. I'd be glad to discuss how my experience could contribute to the Patient Experience team.

Kind regards,
Oskar Haddad-Lindqvist
