Dear Hiring Manager,

I am writing to apply for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role at Corvale Mobility. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS, and a track record of taking platform initiatives from design and implementation through to production. Corvale's need to shape a reliable, observable and secure foundation for connecting its new train fleet with cloud services is a strong match for my infrastructure and platform background.

In my current role as Senior Platform Engineer at Tallybrook, I lead a five-person platform team operating eight AWS EKS clusters across three regions, supporting approximately 350 services. I built an internal developer platform using service templates, Argo CD and Crossplane self-service provisioning for RDS, SQS and S3, reducing the time to take a new service to production from around two weeks to under one day. I also introduced SLOs and error budgets for critical services, reducing weekly on-call pages by approximately 60%, and moved node provisioning to Karpenter with spot instances, reducing EC2 spend by 38%.

My earlier experience includes running AWS game-backend infrastructure for titles with up to 1.2 million daily active players, managing infrastructure through Terraform and Atlantis, and operating Linux environments at scale. Across these roles, I have led technical work, supported service teams, and established practices that help systems remain operable in production. I would bring that experience to Corvale's infrastructure design, Terraform repository, and service deployment support, while helping product teams operate services reliably in production.

Corvale's engineering-led approach and emphasis on end-to-end ownership resonate with the way I work: building dependable platforms that help teams deliver and operate services effectively. I would welcome the opportunity to discuss how my AWS, Kubernetes, Terraform and platform engineering experience could support the Fleet Connectivity team.

Yours sincerely,

Nadia Brennan-Aziz
