Nadia Brennan-Aziz

Senior Platform Engineer | Cloud Infrastructure & Site Reliability Engineering

PROFESSIONAL SUMMARY

Senior Platform Engineer and platform team tech lead with hands-on experience designing, building and operating AWS cloud infrastructure. Strong Terraform and Kubernetes experience, including production EKS platforms, internal developer platform capabilities, reliability engineering and launch capacity planning. Experienced in leading technical work and aligning platform decisions with product leadership. CKA certified.

CORE SKILLS

Cloud infrastructure engineering: AWS, EKS, ECS
Infrastructure as code: Terraform
Platform engineering: Kubernetes, Argo CD, Crossplane, Helm, Karpenter
Reliability and observability: SLOs, burn-rate alerts, Prometheus, Grafana, Alertmanager, PagerDuty
Automation and development: Go, Python, GitHub Actions, controller-runtime
Load testing and capacity planning: k6

PROFESSIONAL EXPERIENCE

Senior Platform Engineer | Tallybrook Ltd *2022–Present*

Tech lead of the platform team, responsible for work across the EKS platform, internal developer platform, service reliability and infrastructure cost.

- Built an internal developer platform using Go and Python service templates, Argo CD ApplicationSets, and Crossplane compositions for RDS, SQS and S3 requested through pull requests.
- Reduced the time to take a new service to production from approximately two weeks to under one day; the platform was adopted by all 14 product teams.
- Replaced cluster-autoscaler managed node groups with Karpenter and introduced Spot capacity for stateless workloads with interruption handling, reducing EC2 spend by 38% (approximately GBP 410,000 per year).
- Established SLOs and burn-rate alerts for the 20 most critical services using Prometheus recording rules and Sloth; reduced pages per week by approximately 60% and agreed an error-budget policy with product leadership.
- Use Terraform to provision and manage AWS infrastructure supporting the EKS platform and internal developer platform.

Site Reliability Engineer | Brightwater Games *2019–2022*

- Managed AWS infrastructure as code with Terraform and Atlantis, including ECS-based services; maintained observability with Prometheus, Alertmanager and Grafana, and led launch capacity planning.
- Ran k6 load tests simulating 300,000 concurrent players and identified and fixed a connection-pool limit before launch.
- Supported game backend reliability during launches serving over one million daily players.
- Worked with EKS in production from 2020.

SELECTED PROJECT

Kubernetes Preview Namespace Cleanup Operator | Open-source side project *2024*

- Built a small Kubernetes controller in Go using controller-runtime to delete expired preview namespaces.

- Project has approximately 120 GitHub stars.

CERTIFICATION

Certified Kubernetes Administrator (CKA)

COMMUNITY & MENTORING

- Speaker at a UK DevOps meetup in 2024: “SLOs that product managers care about”.
- Mentored three engineers transitioning from backend engineering into SRE.
