# Rafael Moretti-Klein

## PROFESSIONAL SUMMARY

Backend and platform engineer with production experience building services in Python and Go, designing APIs, and improving service reliability. Designed and wrote most of a Go entitlement service handling 120k requests per second at peak, and contributed to a Python 2 monolith migration into approximately 60 Python 3 and Go services. Seeking a senior or staff backend individual-contributor role. In the final two years at Streamhaus, hands-on coding focused on internal tools and cost-dashboard scripts.

## TECHNICAL SKILLS

Languages and frameworks: Python, FastAPI, Go, C++
APIs and services: REST APIs, gRPC, microservices
Cloud and infrastructure: GCP, GKE, Kubernetes, Terraform; limited AWS exposure (EC2 and S3)
Data and observability: Cassandra, Redis, BigQuery, OpenTelemetry, Prometheus
Testing and tools: pytest, tox, Looker Studio

## PROFESSIONAL EXPERIENCE

**Director of Engineering | Streamhaus GmbH | 2019–August 2026**

- Led the platform organisation of 45 engineers.
- Set up a service template for the strangler-fig migration of a Python 2 monolith into approximately 60 Python 3 and Go services on GKE, using FastAPI or Go, OpenTelemetry tracing, Prometheus metrics, and Terraform modules.
- Playback API availability improved from 99.5% to 99.95% during the migration.
- Built an internal cost dashboard using BigQuery billing export and Looker Studio, with service owners identified; rightsizing and committed-use discounts saved EUR 4.2 million per year (31%).
- In the final two years, hands-on coding focused on internal tools and cost-dashboard scripts.

**Principal Engineer | Streamhaus GmbH | 2015–2019**

- Tech lead for the playback API and led its technical work.
- Designed and wrote most of the Go entitlement service, which handled 120k requests per second at peak with p99 latency under 15 ms, using Cassandra and local in-memory caching.

## SELECTED ADDITIONAL WORK

**Open-source maintainer | Python retry library | 2012–2018**

- Maintained a Python retry library with approximately 1,500 GitHub stars; handed over maintenance in 2018.
- Used pytest and tox.

**Co-inventor | Granted German patent | 2013**

- Co-inventor of a method for adaptive GPS sampling in vehicle fleets to reduce GPS data volume by adapting sampling to driving context; used C++ and statistics.
