Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. The opportunity to help shape cloud infrastructure for Corvale's new train fleet and take it from architecture into production is a strong match for my experience building and operating Azure infrastructure.

At Havenstad Logistics, I am part of a three-person cloud team operating an Azure estate of approximately 400 virtual machines and 12 AKS clusters. I built Terraform modules for a hub-spoke landing zone with Azure Firewall, private DNS zones, private endpoints, and peering across three subscriptions. I also added Terratest module tests and nightly drift detection. For 15 internal .NET and Node applications, I replaced manual releases with Azure DevOps pipelines covering build, test, and deployment to App Service or AKS; most now deploy several times a week rather than roughly monthly.

My experience also includes operating AKS upgrades, node pools, and ingress, as well as practical security work with MFA, conditional access, mailbox auditing, and backups. Earlier, I led a 60-server VMware-to-Azure migration and administered Windows and Linux servers. My production cloud experience is Azure-based, and my infrastructure work has focused on Terraform, networking, operational reliability, and secure cloud foundations.

I would welcome the opportunity to discuss how this experience could support Corvale's fleet-connectivity platform and its path to production. Thank you for your consideration.

Kind regards,
Samuel Achterberg-Osei
