Quillstone Payments
Hiring Team, Customer Operations AI

Application: Machine Learning Engineer – Customer Support AI

Dear Hiring Team,

Your Customer Operations AI team needs models that turn text into useful support decisions and remain dependable after deployment. My experience combines customer complaint classification in banking with production NLP systems for public administration. I am applying for the Machine Learning Engineer – Customer Support AI role with that combination of support-related text analysis and hands-on model deployment, serving and monitoring.

At Slavonica Document AI, I built and deployed a document classifier that processes approximately 15,000 documents per day, achieving 94% accuracy and 0.91 macro F1 across 23 classes. I fine-tune transformer models, serve them through FastAPI and Docker on Azure App Service, and use MLflow for experiment tracking and the model registry. Operational quality is an important part of this work: my drift monitoring detected a silent OCR change that reduced accuracy by 9 percentage points, and the issue was resolved within a week. I also built a 4,000-document NER dataset with annotation guidelines and two annotators, achieving inter-annotator kappa of 0.87.

Previously, at Baranjska kreditna banka, I developed complaint classifiers covering 11 topics for weekly reporting to customer service management. That experience is directly relevant to the text classification underlying ticket routing. My production language-model work has focused on fine-tuning XLM-R and BERTić; separately, I explored retrieval-augmented question answering over Croatian laws in a personal prototype using sentence embeddings, FAISS and an LLM API. This was a weekend demo assessed through manual checks, not a production assistant.

Quillstone's focus on helping merchants get answers quickly gives these capabilities a clear application: classifying requests, supporting agents and keeping models reliable as incoming text changes. I would bring production NLP experience, Azure deployment skills and a practical approach to monitoring to that work. I would welcome the opportunity to discuss how my background could contribute to your Customer Operations AI team.

Kind regards,
Petra Zlatarić-Novosel
