Corvale Mobility

Application: Cloud Infrastructure / DevOps Contractor - Fleet Connectivity

Dear Hiring Manager,

Corvale Mobility's fleet connectivity project calls for infrastructure that is secure, maintainable and ready for production. I bring hands-on Azure infrastructure engineering, Terraform networking and automated deployment experience relevant to that challenge. In my current contract at Havenstad Logistics, I am part of a three-person team operating approximately 400 VMs and 12 AKS clusters across three subscriptions.

My work on Azure landing zone networking includes Terraform modules for hub-spoke VNets, Azure Firewall, private DNS zones, private endpoints and cross-subscription peering. I added Terratest module tests in the pipeline and nightly drift detection to support ongoing maintenance. This provides a practical foundation for contributing to your infrastructure-as-code repository and network design. My cloud experience is Azure-based, matching your acceptance of other major clouds alongside AWS.

I also replaced manual deployments for 15 internal .NET and Node applications with Azure DevOps YAML pipelines covering build, test and deployment to App Service or AKS. For most applications, deployment frequency increased from roughly monthly to several times per week. I operate AKS upgrades, node pools and ingress, while developers retain ownership of application manifests. Earlier, I planned and led a 60-server VMware-to-Azure migration, completing cutovers over six weekends without unplanned downtime. These projects demonstrate both delivery leadership and attention to reliable operations.

Your team's remit combines early architecture decisions with responsibility for production infrastructure. I would bring experience connecting network design, infrastructure automation and service deployment, supported by a background administering Windows and Linux systems and implementing practical security controls. I would welcome a discussion about how this experience could support the platform linking Corvale's new trains to its backend services.

Kind regards,
Samuel Achterberg-Osei
