Corvale Mobility
Hiring Team

Application: Cloud Infrastructure / DevOps Contractor - Fleet Connectivity

Dear Hiring Team,

Corvale's fleet connectivity project calls for cloud infrastructure that can move from initial architecture to reliable production operation. I bring 10 years of infrastructure experience, including 6 years running Kubernetes platforms on AWS, and currently lead a 5-person platform team. My experience building self-service infrastructure, operating backend platforms and improving observability provides a strong foundation for supporting the cloud side of your new train fleet.

At Tallybrook, I run an EKS platform spanning 8 clusters, approximately 350 services and 3 regions. I built an internal developer platform combining service templates, Argo CD GitOps and Crossplane-based provisioning for RDS, SQS and S3, reducing the time from new service to production from approximately 2 weeks to under 1 day. This work closely matches your need to support backend developers in deploying services that are straightforward to operate. Introducing SLOs and error budgets for 20 critical services also reduced weekly on-call pages by approximately 60%; I serve in the incident commander rotation and wrote our incident and post-mortem process.

At Brightwater Games, I managed AWS infrastructure through approximately 40 Terraform modules, with Atlantis providing plan and apply workflows on pull requests. I also replaced a noisy monitoring setup with Prometheus, Grafana, Alertmanager and Loki, and used k6 load testing to inform launch capacity planning for games serving up to 1.2 million daily active players. These are directly relevant foundations for maintaining your infrastructure-as-code repository and making the backend infrastructure supporting telemetry and alerting observable and reliable.

Your brief combines early system design with responsibility for production outcomes. I would bring technical leadership grounded in operating services at scale, practical Terraform experience and a focus on making infrastructure usable for developers. I would welcome a discussion about how this experience could contribute to Corvale's fleet connectivity platform.

Yours sincerely,
Nadia Brennan-Aziz
