Dear Halden Pay Hiring Team,

I am applying for the Senior Data Engineer - Data Platform position. Your focus on reusable frameworks rather than one-off pipelines closely matches my work: owning production ingestion and orchestration, building shared Python tooling, and making data quality part of delivery rather than an afterthought. I bring nine years of data engineering experience, including payments reconciliation and dimensional warehouse design.

At Lukovac Freight Hub, I own an ingestion layer of approximately 140 Airflow DAGs and participate in the platform's on-call rotation. I migrated approximately 300 stored procedures into dbt and introduced incremental models and slim CI in GitHub Actions, cutting nightly builds from 5h10 to 1h35. Data contracts backed by JSON Schema and CI checks reduced broken-pipeline incidents from approximately nine to two per month. These changes reflect the practical approach I would bring to Halden Pay's shared platform: clear interfaces, tested transformations and reliable day-to-day operation.

My payments experience at Kovalent Pay also maps directly to the role. I built PySpark reconciliation jobs on AWS EMR processing approximately 1.2 TB daily, designed a Redshift star schema for finance and risk, and implemented Great Expectations checks on critical finance tables. A reusable Python library I developed for S3 and Glue Data Catalog access was adopted by four teams. My hands-on cloud experience is with AWS, alongside Snowflake, and I hold the AWS Certified Data Engineer - Associate certification. Airflow, dbt, Python, SQL and CI/CD are central to my current work.

Halden Pay's emphasis on open-source practices is another concrete connection: I contributed two merged fixes and tests to an Airflow provider package and introduced Debezium CDC to replace full-table extracts, reducing database replica CPU during loads from approximately 70% to 25%. I also mentor two engineers and run weekly platform office hours. I would welcome a conversation about how this combination of platform ownership, reusable engineering and payments experience could support your Data Platform team.

Kind regards,
Lena Varga-Holm
