Dear Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My experience combines CI/CD and Kubernetes test infrastructure at Odrava Health with personal infrastructure projects.

At Odrava, I own GitLab CI pipelines for three product teams and built short-lived merge-request environments with Helm on the shared Kubernetes cluster. I cut pipeline time from 38 to 14 minutes and CI runner costs by about 30%. I built a Python, PostgreSQL and Grafana dashboard using GitLab API results to identify flaky tests; the pytest and Playwright suite's flaky-test rate fell from 7% to below 1%. I documented CI workflows for onboarding.

My infrastructure work focuses on CI/CD, Linux tooling and test environments; the platform team operates the shared cluster, where I have namespace-level access. I've provisioned a Hetzner VPS with Terraform, learned AWS EC2/S3 basics, and built a personal k3s cluster with Argo CD, Prometheus, Grafana, Loki, Traefik and cert-manager for TLS. I'm keen to apply this foundation to Corvale's fleet-connectivity platform and develop my cloud infrastructure engineering experience.

Thank you for your consideration. I'd welcome the opportunity to discuss how my shared CI tooling, workflow documentation and mentoring of two QA interns could support Corvale's engineering-led environment.

Marta Kowal-Brandt
