Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role. Corvale's new train fleet and its cloud-connected services are a compelling setting for my work in CI/CD and test infrastructure.

At Odrava Health, I own GitLab CI pipelines for three teams and built Helm-based merge-request environments on a shared Kubernetes cluster. I reduced average pipeline time from 38 to 14 minutes and helped lower flaky tests from 7% to below 1%. The platform team operates the cluster; my access is at namespace level.

My personal k3s homelab uses Argo CD, Prometheus, Grafana and Loki. I have provisioned a Hetzner VPS with Terraform and am learning AWS through personal use of EC2 and S3; I have not used Terragrunt. I am preparing for the CKA exam, booked for January 2027. I would welcome the opportunity to discuss how my automation and infrastructure experience could support Corvale's fleet connectivity work.

Sincerely, Marta Kowal-Brandt
