Dear Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role supporting fleet connectivity. I bring 10 years of infrastructure experience, including six years running Kubernetes platforms on AWS, and am interested in helping take the cloud infrastructure for Corvale's new train fleet from architecture through production.

At Tallybrook, I tech lead a five-person platform team operating EKS across eight clusters and three regions. I built a Terraform-, Argo CD- and Crossplane-based developer platform adopted by all 14 product teams, reducing new-service production time from about two weeks to under a day. I also led a Karpenter and spot migration that reduced EC2 spend by 38%, and introduced SLOs that helped cut on-call pages by approximately 60%.

Previously, at Brightwater Games, I operated AWS backend infrastructure for titles with up to 1.2 million daily active players. I maintained Terraform modules and Atlantis workflows, improved observability, and used k6 testing and capacity planning to prepare for launches. I would welcome the opportunity to discuss how my experience building reliable, observable platforms could contribute to Corvale's fleet connectivity work.

Best wishes,
Nadia Brennan-Aziz
