Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health Software, I support three product teams by building and maintaining CI pipelines and test infrastructure. I'm interested in applying that experience to a platform that connects on-board systems with cloud services and is being shaped for a new train fleet.

I have delivered infrastructure workflows that help teams test and review changes reliably. Using GitLab CI and Helm on a shared Kubernetes cluster, I built short-lived merge-request environments with the application, PostgreSQL and seeded data, including automatic cleanup. I also profiled pipelines across three teams, reduced average run time from 38 to 14 minutes, and lowered monthly CI runner costs by about 30%. These projects have developed my analytical approach to infrastructure problems and my experience coordinating tooling used by QA and product teams.

I'm developing my infrastructure-as-code and cloud experience through Terraform work on a personal Hetzner VPS and a k3s homelab, where I deploy applications with Argo CD and use Prometheus, Grafana and Loki for monitoring. I'm also learning AWS fundamentals. At Odrava, my Kubernetes access is at namespace level, and I create Helm charts for test environments; I have not operated the cluster itself. I would bring a practical, transparent approach to extending this experience, alongside my habit of documenting shared workflows—the CI guide I wrote is used in team onboarding.

Corvale's engineering-led approach and the opportunity to help shape fleet connectivity infrastructure from the start are particularly appealing to me. I would welcome the opportunity to discuss how my experience in CI/CD, test environments and infrastructure tooling could contribute to the team.

Thank you for your time.

Marta Kowal-Brandt
