Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. I'm a DevOps-focused engineer with seven years of experience in QA automation, including the last two focused primarily on CI/CD, test infrastructure and build tooling. My recent work has focused on owning GitLab CI pipelines, building ephemeral Kubernetes test environments, build tooling, and observability, and I am applying that infrastructure experience to a DevOps/platform engineering role. Corvale's work shaping cloud infrastructure for connected trains particularly interests me.

At Odrava Health, I own GitLab CI pipelines for three product teams. They serve approximately 25 developers. I also built short-lived merge-request environments containing the application, PostgreSQL and seeded data, using Docker Compose and Helm on a shared Kubernetes cluster. I also profiled and improved pipeline workflows, cutting average run time from 38 to 14 minutes and monthly CI runner costs by about 30%. I documented how CI works for onboarding and mentored two QA interns, while enabling QA and product teams to review features and run end-to-end tests in isolated environments before merge.

My infrastructure projects also include a three-node k3s homelab managed with Argo CD, with Prometheus, Grafana and Loki monitoring, plus Terraform-provisioned infrastructure for a small Hetzner VPS. I have configured cert-manager for TLS in the homelab. In my personal k3s homelab, I deploy applications with Argo CD and operate Prometheus, Grafana and Loki monitoring, with Traefik ingress and cert-manager for TLS. My Terraform, Hetzner VPS, and AWS EC2/S3 experience has been personal and learning-focused, while my professional Kubernetes work has been performed with namespace-level access on a shared cluster operated by the platform team. I would bring analytical troubleshooting, experience improving developer workflows, and a documentation-led approach to shared infrastructure and a clear understanding of the scope of my experience.

Corvale's engineering-led culture and emphasis on teams taking ownership of their systems appeal to me. I'd welcome the opportunity to discuss how my CI/CD and test-infrastructure experience could contribute to the fleet connectivity platform.

Thank you for your time.

Marta Kowal-Brandt
