Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. In my current role at Odrava Health, I own CI/CD pipelines and build Kubernetes-based, short-lived test environments used by three product teams. I'm now looking to develop further in infrastructure and platform engineering, and the opportunity to help shape the infrastructure behind Corvale's connected fleet is a strong match for that direction.

At Odrava, I improved average pipeline duration from 38 to 14 minutes and reduced monthly CI runner costs by about 30%. I also built merge-request environments with Helm and GitLab CI, including PostgreSQL and seeded data, with automatic cleanup and end-to-end tests. These workflows gave QA and product teams a way to review changes before merge. I maintain a pytest and Playwright suite of around 900 tests, and helped reduce its flaky-test rate from 7% to below 1%. I've documented how our CI works for onboarding and mentored two QA interns, experience that has strengthened my ability to explain technical workflows and support shared ownership across teams.

My infrastructure experience includes namespace-level work on a shared Kubernetes cluster and a personal three-node k3s project deployed through Argo CD. For that project, I configured Prometheus, Grafana, Loki, Traefik ingress and cert-manager for TLS, and used Terraform to provision a small Hetzner VPS. My Terraform experience is currently from this personal project; my professional infrastructure work has focused on CI/CD and Kubernetes-based test environments. I would bring practical experience with Linux, containers, Helm, monitoring and certificate management, alongside a clear understanding of the limits of my current cloud and infrastructure-as-code experience.

Corvale's engineering-led approach and emphasis on end-to-end ownership appeal to me. I'd welcome the opportunity to discuss how my experience building and improving shared engineering workflows could contribute to the fleet connectivity platform.

Thank you for your consideration.

Marta Kowal-Brandt
