Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role. I bring seven years of experience in software quality and automation, with direct ownership of CI/CD pipelines and test infrastructure used by three product teams. My current work is centered on delivery infrastructure: building short-lived environments and improving the workflows and tooling that help teams release and test software reliably.

At Odrava Health Software, I own GitLab CI pipelines used by three product teams and built merge-request environments deployed to a shared Kubernetes cluster with Helm. By parallelising jobs, adding dependency caching and reorganising end-to-end tests, I reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by approximately 30%. I have also built Python and Bash tooling, documented the CI workflow for onboarding, and created Grafana dashboards that helped teams reduce flaky tests from 7% to below 1%.

Alongside my professional work, I built a three-node k3s homelab with Argo CD, Prometheus, Grafana, Loki, Traefik and cert-manager, and used Terraform to provision infrastructure for a small Hetzner VPS. This has given me practical experience with GitOps, monitoring, TLS certificate management and infrastructure as code, complementing my day-to-day work deploying test environments within a shared Kubernetes platform.

Corvale's work connecting a new train fleet with cloud services is a compelling infrastructure challenge: the platform needs to support data flows and remote updates while remaining observable, reliable and secure. I would welcome the opportunity to discuss how my experience improving delivery infrastructure and building practical automation could contribute to the fleet connectivity team.

Kind regards,
Marta Kowal-Brandt
