Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. My background is in QA automation and test infrastructure, where I've increasingly focused on building CI/CD pipelines, Kubernetes-based environments, and observability tooling that help product teams deliver and operate software reliably. I'm interested in bringing that experience to Corvale's work connecting a new train fleet with its cloud platform.

At Odrava Health Software, I own GitLab CI pipelines for three product teams, covering build, test and artifact-publishing stages. I work with developers and QA across three teams to shape pipeline changes, make test environments usable for feature review, and turn recurring delivery problems into measurable improvements. I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%, and built short-lived Kubernetes test environments deployed with Helm. I also maintain a roughly 900-test pytest and Playwright suite; its flaky-test rate has fallen from 7% to below 1%. These projects have involved making infrastructure practical for developers and QA teams, and explaining how it works through an internal CI guide now used in onboarding.

My Kubernetes experience at work is with namespace-level access on a shared cluster, where I develop Helm charts for test environments. Alongside that, I built a three-node k3s homelab with GitOps deployments, Prometheus, Grafana and Loki for monitoring and logging, Traefik ingress, and cert-manager for TLS, and provisioned a small Hetzner VPS with Terraform in a personal account. I have also worked with Linux-based infrastructure and explored AWS EC2 and S3 at a basic personal-learning level. My Terraform experience is currently personal rather than production cloud experience, while my hands-on work includes designing short-lived application environments, PostgreSQL test-data flows, GitOps deployments, monitoring, logging, ingress, and TLS certificate management. I've also mentored two QA interns, and I'm studying for the CKA exam.

Corvale's engineering-led approach and emphasis on ownership and solving problems collaboratively appeal to me. I'd welcome the opportunity to discuss how my experience analysing delivery bottlenecks, improving CI/CD reliability, documenting technical workflows, and building observable test environments for engineering teams could contribute to the fleet connectivity platform.

Thank you for your time and consideration.

Marta Kowal-Brandt
