Dear Hiring Manager,

I am applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. The opportunity to help shape infrastructure for Corvale Mobility's new train fleet is a strong match for the direction of my work: building reliable delivery workflows and environments that help teams develop, test and review software with confidence.

At Odrava Health Software, I own GitLab CI pipelines for three product teams and built merge-request environments deployed with Helm to a shared Kubernetes cluster. These environments bring together the application, PostgreSQL and seeded data, run end-to-end tests, and clean themselves up after merge or inactivity. I also reduced average pipeline time from 38 to 14 minutes and monthly CI runner costs by about 30%. I document how the CI system works for onboarding and work with QA and product teams using the environments.

Alongside my production experience, I built a personal three-node k3s homelab with GitOps deployments, Prometheus, Grafana, Loki, Traefik and cert-manager, and used Terraform to provision infrastructure for a small Hetzner VPS. My production Kubernetes work is at namespace level, with the platform team operating the shared cluster; I have not yet operated a cloud fleet platform. I would bring practical CI/CD and environment automation experience, along with a clear understanding of the scope of my current infrastructure experience.

Corvale's focus on connecting onboard systems with cloud services makes this role especially interesting: it brings infrastructure, backend services and real-world devices together. I would welcome the opportunity to discuss how my experience building delivery and test infrastructure could contribute to the fleet connectivity team.

Sincerely,
Marta Kowal-Brandt
