Dear Corvale Mobility Hiring Team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role on the Fleet Connectivity team. In my current role at Odrava Health Software, I own CI pipelines and build short-lived test environments for three product teams. I'm now moving toward infrastructure and platform engineering, bringing practical experience with automation, Kubernetes-based deployments and making systems easier for teams to use and operate.

At Odrava, I analysed pipeline bottlenecks across three teams and built merge-request environments as infrastructure-as-code-style, repeatable deployments using Helm and GitLab CI on a shared Kubernetes cluster. I also improved CI pipelines across three teams, reducing their average duration from 38 to 14 minutes and monthly runner costs by about 30%. These projects required me to work across three product teams, understand their testing and delivery needs, make targeted technical changes, and document the resulting system clearly for onboarding; I wrote the internal guide to our CI system, which is used in onboarding.

Alongside my work, I've built a personal three-node Linux-based k3s cluster with GitOps using Argo CD, and set up Prometheus, Grafana, Loki, Traefik and cert-manager for monitoring, ingress and TLS. I've also used Terraform to provision a small Hetzner VPS. I have also learned the basics of AWS EC2 and S3 through personal study, while my hands-on infrastructure provisioning experience includes Terraform for a small Hetzner VPS. My professional infrastructure experience is centered on CI and test environments, and I'm continuing to develop my cloud infrastructure skills. I'd be glad to bring hands-on experience in CI/CD automation, repeatable Kubernetes deployments, observability, technical documentation and measurable reliability improvements to Corvale's work on reliable, observable and secure infrastructure, while continuing to grow toward cloud platform and fleet-connectivity engineering.

Thank you for your consideration. I'd welcome the opportunity to discuss how my experience could contribute to the team.

Marta Kowal-Brandt
