Dear Corvale Mobility team,

I'm applying for the Cloud Infrastructure / DevOps Contractor role. At Odrava Health, I have focused on CI/CD pipelines and test infrastructure, building practical experience in making shared systems more efficient, reliable and easier for teams to use.

I own GitLab CI pipelines for three product teams, supporting around 25 developers. By profiling workflows, parallelising jobs, caching dependencies and separating end-to-end tests, I reduced average pipeline time from 38 to 14 minutes and monthly runner costs by about 30%. I also implemented short-lived merge-request environments using Docker Compose and, later, Helm on a shared Kubernetes cluster. These environments let teams review features and run end-to-end tests before merge. I also wrote an internal guide to our CI workflows that is used in team onboarding, helping developers and QA colleagues adopt shared tooling consistently. My Kubernetes work is at namespace level; the platform team operates the cluster.

I'm developing my infrastructure skills beyond my work at Odrava. In a personal project, I built a three-node k3s cluster with GitOps deployments, monitoring, ingress and TLS, and used Terraform to provision a small Hetzner VPS. My personal infrastructure work includes provisioning a small Hetzner VPS with Terraform and building a k3s homelab with GitOps deployments, Prometheus, Grafana, Loki, Traefik and cert-manager. I'm also learning AWS fundamentals through EC2 and S3 practice, rather than through production ownership, and I'm preparing for the CKA exam, scheduled for January 2027. My experience is strongest in CI/CD and test infrastructure, with Terraform so far used in personal projects; I would bring that practical foundation and a careful, analytical approach to the fleet connectivity work.

Corvale's plans to connect a new train fleet to its cloud platform make this an appealing opportunity to contribute to systems where reliability, observability and secure communication matter. In 2023, I also mentored two QA interns, which strengthened my ability to explain technical practices clearly and support colleagues with different levels of experience. I would welcome the chance to discuss how my experience improving shared CI infrastructure, building short-lived environments and documenting workflows could support Corvale's teams as they develop reliable and observable cloud-connected services.

Thank you for your time.

Marta Kowal-Brandt
