PROFESSIONAL SUMMARY

Data Scientist with experience in forecasting, churn modelling and experimentation. Uses Python and Google Cloud Platform (GCP) services including BigQuery and Vertex AI Workbench to develop analytical models, scheduled notebook workflows and batch-scoring processes, with measurable results in forecast accuracy and customer retention. Brings practical feature-engineering experience, pytest unit testing for forecasting feature code, and experience building a Dockerised Streamlit experiment tool in collaboration with a data platform team. Holds an MSc in Statistics.

TECHNICAL SKILLS

Programming and analysis: Python, SQL, R
Machine learning: LightGBM, XGBoost, feature engineering, SHAP, scikit-learn, pandas
Cloud, data and orchestration: Google Cloud Platform (GCP), BigQuery, Vertex AI Workbench, dbt Cloud Scheduler
Software and tools: pytest, Docker, Streamlit, statsmodels, R Markdown, Looker
Additional learning: PyTorch, torchvision

PROFESSIONAL EXPERIENCE

Data Scientist | Thistlebox *2022–Present*

- Developed a weekly recipe-demand forecasting workflow predicting orders by recipe and region six weeks ahead, using LightGBM with calendar, price and menu-position features.
- Scheduled a Vertex AI Workbench notebook job to generate weekly forecasts and write results to BigQuery for operations reporting in Looker.
- Improved forecast WAPE from 23% to 14%; the work was associated with an estimated 9% reduction in food waste.
- Built a churn propensity model using XGBoost; implemented a weekly batch-scoring workflow in BigQuery, with retention offers targeted to customers in the top decile.
- Evaluated retention targeting using a 10% holdout; churn was 2.1 percentage points lower in the treated group.
- Developed a Streamlit application for planning and analysing sequential A/B tests, used by approximately 25 people in product and growth. Wrote the app and its Dockerfile; the data platform team handles deployment on Cloud Run.
- Began writing pytest unit tests for forecasting feature code in 2025; coverage is approximately 60%.
- Delivered the internal training session “Stats for PMs” three times.

Junior Data Analyst | Firth Energy Retail *2020–2022*

- Segmented customers and analysed tariffs using R and SQL.
- Automated monthly regulator reports with R Markdown, saving the team approximately two days each month.

SELECTED PROJECT

Image Classification Course Project | Personal *2025*

- Fine-tuned a small CNN in PyTorch on a public food-images dataset as part of an online deep-learning course; achieved approximately 80% accuracy.
- Tools: PyTorch, torchvision, Google Colab.

EDUCATION

MSc in Statistics
Dissertation: Bayesian hierarchical models
