MARTA KOWAL-BRANDT

Dear Corvale Mobility Hiring Team,

I am applying for the Cloud Infrastructure / DevOps Contractor role. The opportunity to help build the infrastructure for Corvale's new train fleet, from early design through production, particularly interests me. My experience is strongest in CI/CD, deployment automation and test infrastructure, where I have made delivery workflows faster and test environments easier for teams to use.

At Odrava Health Software, I own GitLab CI pipelines serving three product teams and built short-lived merge-request environments deployed with Helm to a shared Kubernetes cluster. The environments include the application, PostgreSQL and seeded data, and are automatically removed after merge or inactivity. I also reduced average pipeline time from 38 to 14 minutes and helped reduce the end-to-end test flaky rate from 7% to below 1%. I documented how the CI system works for onboarding and built Grafana dashboards so teams could identify flaky-test trends.

I have also built a personal k3s homelab using Argo CD, with Prometheus, Grafana and Loki monitoring, Traefik ingress and cert-manager for TLS; I provisioned a small Hetzner VPS with Terraform. My Kubernetes work at Odrava is limited to namespace-level access on a shared cluster, and my Terraform and AWS EC2/S3 exposure is from personal learning rather than production cloud operations. I would bring this practical automation and test-infrastructure experience while continuing to grow into broader cloud platform ownership.

I would welcome the opportunity to discuss how my experience building reliable delivery workflows and observable test environments could contribute to Corvale's fleet-connectivity platform.

Kind regards, Marta Kowal-Brandt
