Nadia Brennan-Aziz

Dear Corvale Mobility hiring team,

I'm applying for the Cloud Infrastructure / DevOps Contractor – Fleet Connectivity role. I bring 10 years of infrastructure experience, including six years operating Kubernetes platforms on AWS.

At Tallybrook, I'm the technical lead of a five-person platform team operating eight EKS clusters across three regions and supporting approximately 350 services. I designed and built an internal developer platform adopted by all 14 product teams, reducing the time to take a new service to production from around two weeks to under a day. I led the introduction of SLOs and burn-rate alerts for 20 critical services, agreed the error-budget policy with product leadership, and reduced on-call pages by approximately 60%, as well as reducing EC2 spend by 38% through a Karpenter and Spot migration.

This experience is relevant to shaping Corvale's train-to-cloud infrastructure: I have designed and operated AWS cloud environments, maintained Terraform-based infrastructure, and taken platform and system-design improvements from proposal through production. At Brightwater Games, I used k6 load tests to simulate 300,000 concurrent players and identified a connection-pool limit before launch. I would bring the same analytical, preparation-led approach to the connectivity platform. Earlier, as a Linux Systems Engineer, I managed approximately 600 Linux servers, complementing my experience operating AWS-based platforms and approximately 600 Linux servers.

Corvale's focus on teams owning their systems and solving problems collaboratively particularly appeals to me. I'd welcome the opportunity to discuss how my platform and infrastructure experience could contribute to the Fleet Connectivity team.

Best wishes,

Nadia Brennan-Aziz
